

# Learning Activities Introduction

---

## Introduction

The intent of this guide is to assist State Survey Agency (SA) Preceptors, or Training Coordinators, by providing activities that designed and developed to use in the training and development of new surveyors.

Each activity contains instructions and resources to conduct the activity with a single new surveyor or within a classroom environment.

The organization of these activities is according to regulations; however, the preceptor may find that some activities relate to more than one regulation.

Preceptors should try to use these activities in correlation with field experiences and/or basic training topics. In many cases, these activities will provide opportunity for further guided discussion with the new surveyor. You may download and add your state regulations and verbiage to these as well.

Please remember these are training aids only, not official Centers for Medicare & Medicaid Services (CMS) training documents.
